

Recovery Capital tracking - this is the Recovery Capital that we are providing and capturing with our clients. The expectation is that the more Recovery Capital they gain, the more resilience and the more chances of long-term recovery. We complete the questionnaire within 2 weeks of intake and then in two-week intervals up to ten weeks. If we compare intake results to the 10 - week results, we should see a significant increase in Recovery Capital for the client.

Simon House - Forms Statistics Report
